

"Visual Logic: The Pure CSS Game Jam" is a 60-minute competitive coding challenge where developers push the boundaries of front-end creativity by building fully playable, interactive games using only HTML and CSS—absolutely no JavaScript allowed. The event kicks off with the reveal of a simple game theme (such as "Memory Match" or "Slide Puzzle"), followed by a 45-minute rapid prototyping phase where participants rely solely on advanced CSS selectors, animations, and clever HTML structures to craft their games, assisted only by mentors for CSS tricks. After submission via CodePen or GitHub Gist, the final 10 minutes are dedicated to playtesting and judging, with winners recognized for creativity, visual polish, and ingenious use of pure CSS to achieve interactivity and fun.

Team Size : Individual or 2

"Pixel Perfect: The CSS Art Battle" is a fast-paced 60-minute creative showdown where teams race to recreate a secret, complex image—such as a famous painting, landmark, or brand logo—using only HTML and CSS, with absolutely no images, SVGs, or external assets allowed. After a 5-minute planning period, teams have 45 minutes to craft their visual replica entirely from <div> elements and styles, leveraging gradients, shadows, clipping, and positioning to match the target. Winners are judged on visual accuracy, CSS craftsmanship, and the creativity of their code structure, pushing the limits of what can be built with pure styling.

Team Size : Individual or 2

"Single View Studio: The Figma App Sprint" is a focused 60-minute UI/UX design challenge where participants build a complete, functional mobile app interface within a single screen—no scrolling, tabs, or navigation allowed. Starting with a theme like a weather dashboard, music player, or wellness tracker, designers have 45 minutes to craft a pixel-perfect, high-density layout in Figma that delivers all core features and information at a glance. Submissions are judged on visual clarity, information architecture, and usability within the strict one-view constraint, rewarding designs that balance elegance with practicality in minimal space.

TECHNICAL THESIS

Welcome to **Technical Thesis**, where deep research meets visionary presentation! This is your arena to showcase a well-crafted paper on an impactful tech topic—from AI ethics to sustainable systems, from algorithm breakthroughs to future-ready infrastructure. You'll present your findings with clarity, defend your insights, and bring data to life through compelling delivery. This is more than a presentation—it's where rigorous analysis meets persuasive storytelling. Step forward, share your work, and let your ideas shape tomorrow.

Team Size : 2 or 3

The Predictive Parser

Welcome to the ultimate battle of wits and code intuition! In this two-stage mental sprint, you'll first tackle rapid-fire tech trivia in a online quiz. Top performers then advance to the live **Output Prediction Round**, where you'll analyze real code snippets and forecast their results—without running a single line. It's not just what you know, but how you think under pressure. Can you decode the logic before the clock runs out?
